Print Processes & Pairings

D

Digital

Our state-of-the-art digital presses print vibrant, full-color artwork and can be paired with several print processes.

F L T DC LC

L

Letterpress

A digital design is sent to film as a negative and then exposed to a plate, which is pressed onto thick cotton paper.

D F DC

F

Foil Printing

A foil transfer process is used to apply foil to paper and leave your incredible design behind.

D DC L T

T

Thermography

When a piece of stationery is printed, resin is sprinkled on the wet ink and exposed to heat. The resin and ink fuse together, raising the lettering.

D F DC

DC

Die Cutting

A steel blade is used to punch out unique shapes, cuts and frames.

D F L T W

LC

Laser Cutting

A focused beam of light cuts beautifully intricate designs into paper. The laser is controlled by a computer for flawless design. Only available by custom quote.

D

W

White Ink

White Ink Printing uses white toner instead of your run-of-the-mill white ink, so you can get the vibrant white print you crave.

DC

EF

Enhanced Raised Foil

A specialty print process that adds raised foil to the printing and can be featured on one or both sides of the printed piece!

D

UV

UV Printing

Printing on clear stocks requires a special process called UV Printing, a form of digital printing that uses ultra-violet lights to dry or cure ink as it is printed.
